ESIS®

Loss Control – Department of Transportation (DOT) Safety fitness mock audit

Our fleet specialists have strong knowledge of DOT regulations, the safety fitness compliance review process, and regulations regarding fleet safety, railroads, and hazardous materials. Our specialists have the ability to complete audits that help predict the safety fitness rating of the motor carrier in the event of a DOT compliance review.

We have developed two types of audits:

Verification audit

ESIS fleet specialists assess your specific audit items and discuss the implementation of each item with management, supervisors, and employees. We can also include an in-depth review of your records and documentation.

Office audit

ESIS fleet specialists will discuss your specific audit items with management to ensure local management is aware of and appears to be implementing the items.

In either method, recommendations will be developed in light of your loss experience to strengthen your loss control program and improve results.

Comprehensive Safety Analysis (CSA) 2010 safety management system

CSA 2010 is a new Federal Motor Carrier Safety Administration (FMCSA) safety program to improve commercial fleet safety and ultimately reduce crashes. It introduces a new enforcement and compliance model that allows FMCSA and its state partners to contact a larger number of carriers earlier in order to address safety deficiencies before crashes occur. ESIS fleet specialists have extensive experience working with the Behavior Analysis and Safety Improvement Categories (BASICS). ESIS has developed a Safety Management System (SMS) audit program that can be used to ensure that your fleet is in compliance with all of the BASICS. The audit process will also inform the company on how they can go beyond the minimum standards of each BASIC to see even greater improvement in losses.

Customized fleet driver training

ESIS fleet specialists have developed customized driver training programs for many large fleets. The training uses behavior-based training principles to maximize the effectiveness of the training. By using your vehicles, your drivers, and your work environment, these programs will have more meaning to your drivers and will be better received than generic programs.

Training includes training at employee, supervisor, and management levels in multiple topics related to fleet safety and compliance. This training can be delivered through a variety of media. ESIS can customize our training programs to meet your specific needs; we have developed training programs for a variety of topics including, but not limited to:

- Shipping Dock Safety
- Cargo Handling
- Hand-truck Safety
- Driver Daily Logs
- Daily Vehicle Condition Reports

DriverAware is broken into two sessions to arm you and your drivers with the tools needed to apply key physical and behavioral controls to help improve driving skills.

Toll-free fleet monitoring

ESIS can provide a toll-free number, “How’s my driving?” monitoring, and reporting service for all types of vehicles from flatbed trailers and tractors to subcompact cars.

Trained operators answer calls 24 hours a day, 365 days a year. All call records will be stored, from which you can receive incident reports as needed including monthly roll-up reports that allow you to identify trends, track progress, and compare your fleet’s performance against others. Using this data, ESIS’ detailed incident and monthly reports also help you to identify those drivers more prone to accidents and those who may need additional coaching, counseling and/or refresher training before accidents occur.

DriverAware safety training

ESIS DriverAware is a behavioral-based training program designed for experienced drivers. It promotes new competencies and provides behavioral tools for tractor-trailer, straight truck/van and passenger car drivers. Through a combination of classroom and video instruction, each session teaches critical facts related to the vehicles the participants operate as well as techniques for evaluating and improving driving skills.
